Nour KOUIDER

Final-Year Engineering Student | Generative AI, LLMs & Agentic AI
Paris | +33 6 22 99 36 67 | nourkouider05@gmail.com
linkedin.com/in/nour-kouider-7565ab282 | github.com/nour0205
Seeking a 6-month end-of-studies internship in Generative & Agentic AI from February 2027

EDUCATION

CESI École d'Ingénieurs 2026 – 2027
Final-year academic exchange – AI & Data Specialization *Strasbourg, France*

South Mediterranean University (MedTech) 2022 – 2027
Diplôme d'Ingénieur in Software Engineering – Two-time Academic Excellence Scholarship recipient *Tunis, Tunisia*

EXPERIENCE

Devoteam Jun 2026 – Aug 2026
Generative AI Engineering Intern | AI Agents & Process Automation
Built an agentic AI platform that analyzes and optimizes pharmaceutical procurement BPMN processes from natural-language instructions.

- Designed a recommendation pipeline combining deterministic BPMN analysis with **Qwen3-8B** reasoning across 9 improvement categories, with a controlled evaluation set of 6 AS-IS/TO-BE process pairs.
- Built a **LangGraph** agent translating user requests into structured BPMN transformations, with deterministic validation, human-in-the-loop approval, and rollback.
- Automated the generation of operating procedures and functional specifications from BPMN models with an LLM pipeline.
- Implemented **96 automated pytest tests** covering BPMN analysis, recommendation validation, and process transformations.

Mermaid.js Jan 2025 – Feb 2026
Open-Source Contributor | 11+ Merged Pull Requests
Contributed to Mermaid.js, an open-source library for generating diagrams from text-based descriptions.

- Contributed the **inheritDir** option for controlling subgraph direction and rendering fixes across multiple diagram types; invited to join the mermaid-js GitHub organization as a result.

Sopra HR Software Jun 2025 – Aug 2025
Software & Machine Learning Engineering Intern | Workforce Planning
Developed a leave-management platform integrating machine learning to help managers anticipate leave requests and periods of reduced team capacity.

- Trained a classifier predicting employee leave requests (ROC-AUC 0.73, F1 0.62), deployed via FastAPI with SHAP explanations in a workforce-planning dashboard.
- Built a **12-stage CI/CD pipeline** with Jenkins, Docker, Terraform, and AWS EC2, with Prometheus and Grafana monitoring.

WEVIOO Jun 2024 – Aug 2024
Software Engineering Intern | Real-Time Collaboration
Developed an internal real-time messaging platform enabling employees to communicate across departments.

- Built it with the MERN stack and Socket.IO (REST/WebSocket architecture), with JWT authentication and MongoDB persistence.

Hewlett Packard Enterprise Jun 2023 – Aug 2023
Software Engineering Intern | Process Automation
Analyzed Technical Account Managers' workflows to identify and prioritize automation opportunities.

- Conducted user interviews, formalized requirements, and designed an automation PoC presented to business teams.

AI PROJECTS

Recall – Grounded RAG Study Assistant github.com/nour0205/Recall 2026

- Built a RAG assistant that answers course questions only from the student's own notes: every claim cites its source passage, and unsupported questions get an explicit "I don't know." (hybrid vector/**BM25** retrieval with **RRF**, GPT-4o-mini, FastAPI, React, Docker, CI).
- Evaluated design choices by ablation and claim-level human review (fully grounded answers: **26%** → **95%** vs. a standard prompt); built a 48-question stress benchmark whose 14 refusal traps were all refused, and checked an **LLM judge** against held-out human labels.

EchoBloom – Speech Emotion Recognition for UE5 | Best Student Project Award, MedTech 2026

- Developed a speech emotion recognition pipeline using SpeechBrain and Wav2Vec 2.0 to generate confidence-scored predictions and drive MetaHuman facial animations in Unreal Engine 5.

Cognitive Performance Prediction Platform 2026

- Built an explainable cognitive-performance prediction platform using an 80,000-record dataset, achieving an **R^2 of 0.931**; integrated SHAP explanations, KMeans segmentation and LLM-generated insights.

TECHNICAL SKILLS

GenAI / Agents	LangGraph, LangChain, RAG (ChromaDB, BM25, reranking), tool calling, human-in-the-loop, prompt engineering, OpenAI API, LLM/RAG evaluation
Software	Python, FastAPI, REST APIs, pytest, Git, Linux, Docker, Java, TypeScript
ML / Data	scikit-learn, Pandas, NumPy, SQL, model evaluation, SHAP
Cloud / MLOps	AWS, Terraform, Jenkins, CI/CD, Prometheus, Grafana

CERTIFICATIONS & LANGUAGES

Microsoft Certified: Azure AI Apps & Agents Developer Associate (AI-103), 2026
PSM I – Scrum.org, 2026 • **IBM Generative AI** – RAG & GenAI Applications, 2026
Languages: French – C1 English – C1
